## **GENERAL INSTRUCTIONS FOR COMPLETING SF 298**

The Report Documentation Page (RDP) is used in announcing and cataloging reports. It is important that this information be consistent with the rest of the report, particularly the cover and title page. Instructions for filling in each block of the form follow. It is important to stay within the lines to meet optical scanning requirements.

- Block 1. Agency Use Only (Leave blank).
- Block 2. Report Date. Full publication date including day, month, and year, if available (e.g. 1 Jan 88). Must cite at least the year.
- Block 3. Type of Report and Dates Covered. State whether report is interim, final, etc. If applicable, enter inclusive report dates (e.g. 10 Jun 87 30 Jun 88).
- Block 4. <u>Title and Subtitle</u>. A title is taken from the part of the report that provides the most meaningful and complete information. When a report is prepared in more than one volume, repeat the primary title, add volume number, and include subtitle for the specific volume. On classified documents enter the title classification in parentheses.
- Block 5. Funding Numbers. To include contract and grant numbers; may include program element number(s), project number(s), task number(s), and work unit number(s). Use the following labels:

C - Contract PR - Project
G - Grant TA - Task
PE - Program WU - Work Uni

PE - Program WU - Work Unit Element Accession No.

- **Block 6.** Author(s). Name(s) of person(s) responsible for writing the report, performing the research, or credited with the content of the report. If editor or compiler, this should follow the name(s).
- Block 7. <u>Performing Organization Name(s) and Address(es)</u>. Self-explanatory.
- **Block 8.** <u>Performing Organization Report Number</u>. Enter the unique alphanumeric report number(s) assigned by the organization performing the report.
- **Block 9.** Sponsoring/Monitoring Agency Name(s) and Address(es). Self-explanatory.
- Block 10. Sponsoring/Monitoring Agency Report Number. (If known)
- Block 11. Supplementary Notes. Enter information not included elsewhere such as: Prepared in cooperation with...; Trans. of...; To be published in.... When a report is revised, include a statement whether the new report supersedes or supplements the older report.

Block 12a. <u>Distribution/Availability Statement</u>. Denotes public availability or limitations. Cite any availability to the public. Enter additional limitations or special markings in all capitals (e.g. NOFORN, REL, ITAR).

DOD - See DoDD 5230.24, "Distribution Statements on Technical Documents."

DOE - See authorities.

NASA - See Handbook NHB 2200.2.

NTIS - Leave blank.

Block 12b. Distribution Code.

DOD - Leave blank.

**DOE** - Enter DOE distribution categories from the Standard Distribution for Unclassified Scientific and Technical Reports.

NASA - Leave blank. NTIS - Leave blank.

- **Block 13.** Abstract. Include a brief (Maximum 200 words) factual summary of the most significant information contained in the report.
- **Block 14.** <u>Subject Terms</u>. Keywords or phrases identifying major subjects in the report.
- **Block 15.** <u>Number of Pages</u>. Enter the total number of pages.
- **Block 16.** <u>Price Code</u>. Enter appropriate price code (NTIS only).
- Blocks 17. 19. Security Classifications. Self-explanatory. Enter U.S. Security Classification in accordance with U.S. Security Regulations (i.e., UNCLASSIFIED). If form contains classified information, stamp classification on the top and bottom of the page.
- Block 20. <u>Limitation of Abstract</u>. This block must be completed to assign a limitation to the abstract. Enter either UL (unlimited) or SAR (same as report). An entry in this block is necessary if the abstract is to be limited. If blank, the abstract is assumed to be unlimited.

### FOREWORD

Opinions, interpretations, conclusions and recommendations are those of the author and are not necessarily endorsed by the US Army.

### I. Introduction

Breast cancer is a major public health problem in the United States accounting for nearly 30% of all cancers and 18% of all cancer deaths occurring in women (1). It affects one in nine white women, one in eleven black women and one in eighteen Hispanic and Chinese women in their lifetime. Based on current mortality rates in California, one in thirty black women, one in thirty-six white women and one in seventy Hispanic women, and one in eighty Chinese women will die of breast cancer

Although about one quarter of cancer patients in the United States use alternative therapies (2,3), ethnic differences in the use and consequences of these therapies have not been examined. Our long range goal is to assess outcomes including cost, quality of life, recurrence and survival among breast cancer patients in four ethnic groups in San Francisco, California using conventional and alternative therapies.

The specific aims of this study are:

- 1. To determine the types of alternative and conventional therapies used by women in four different ethnic groups in San Francisco who were diagnosed with breast cancer between 1990 and 1992. The ethnic groups to be studied are Hispanics, whites, blacks, and Chinese--Americans.
- 2. To determine the prevalence of use of conventional and alternatives cancer therapies alone in combinations.
- 3. To assess the frequency and length of use of various medical care alternatives before and after cancer diagnosis confirmation.
- 4. To determine the influences, if any, of ethnicity, nativity (foreign vs. US born), length in the US, acculturation, family income, education, religion, social support, health insurance status, first degree family history of breast cancer, age at diagnosis, stage at diagnosis, node involvement, and estrogen receptor status on the use of different therapies.

We propose to conduct telephone interviews on approximately 400 breast cancer patients and assess their treatment choices and factors influencing the choice.

### II. Task Completed in the Past Year

- 1. A part-time research coordinator was hired in October 1994 who also speaks Chinese and serves as a Chinese interviewer. Another Spanish bilingual survey worker was hired in June 1995.
- 2. Approximately 600 abstract forms with medical and surgical information on women diagnosed with in situ and invasive breast cancer in San Francisco city and county between January 1990 to December 1992 were requested from the California Tumor Registry which was operated by the Northern California Cancer Center.

- 3. Development of the Survey Instrument
- (a) The questionnaire of the study was developed and translated into Chinese and Spanish in January 1995. (See Appendix I)
- (b) A physician letter, a deceased patient physician letter, a case letter and consent form were finalized in January 1995. (See Appendix II)
- (c) Pilot tested, revised and finalized the questionnaire in February 1995.
- (d) Back translating the translated questionnaire into English was completed in March 1995.
- (e) An interviewer's training manual has been prepared to explain the background and the purpose of the study, including question by question instructions of the survey questionnaire. (See Appendix III)
- 4. Telephone Survey and Data Processing

The telephone interviews began in March, between March 1 and August 15, 1995, a total of 369 physician letters were sent, and 264 case letters were mailed. 121 interviews have been completed. Of these, 35 were whites, 28 were blacks, 23 were Hispanics, and 35 were Chinese. All the completed surveys have been edited, and the collected data has been entered into the computer.

The following tables shows the preliminary data.

Table 1: Indicates case status as of 8/15/95

Chinese cases have the highest refusal. The reason for this needs further explanation. The other investigators from the Northern California Cancer Center have experienced similar high refusal in the past, there is suspicion and distrust in the Chinese community.

Table 2: Shows the type of treatment for breast cancer by four ethnic groups

It is evident that ethnic differences prevail in the use of various therapies for breast cancer. White cases used more dietary regimen and psychological methods than other ethnic groups. The other treatment was mainly Tamoxifen.

Table 1

# Conclusions

We will continue conducting telephone interviews for breast cancer patients in the next half year. Statistical data analysis will be performed in the last six months of the study. No changes of future work is recommended.

, M.D. Address San Francisco, CA 941

Dear Dr.:

We are conducting an epidemiologic study to determine the use of alternative and conventional therapies by breast cancer patients. This population-based study includes women in four ethnic groups living in San Francisco County who were newly diagnosed with breast cancer during the period 1990 to 1992. Participation involves a single, 30-minute telephone interview concerning use of therapies as well as potential influences on use, such as age, acculturation, education, income, religion, and social support.

We obtain the names of patients from the California Tumor Registry, the agency mandated by the State to collect tumor data. Prior to contacting patients, we routinely ask their physicians about any medical contraindications to approaching them. You were listed as the physician of record for \_\_\_\_\_\_ If you feel there are medical contraindications to our making initial contact with her by letter, please call me at (415) 476-0743. If I do not hear from you within two weeks, I will assume that there are no contraindications to our approaching this patient. We will then send a letter explaining our study to her.

Our multi-lingual trained interviewers are sensitive to challenges faced by cancer patients. They will conduct the interview at a time convenient to each subject. All records will be handled as confidentially as possible. No patient or physician will be identified by name to anyone outside our research unit. A subject may refuse to participate at any time. We expect that most subjects will be glad to contribute to cancer research by helping with our study.

I greatly appreciate your assistance. Please feel free to call me if you would like any further information about this study.

Sincerely,

Marion Lee, Ph.D.
Principal Investigator
Associate Professor
of Epidemiology and Biostatistics

Dear Dr:		

We are conducting an epidemiologic study to determine the use of alternative and conventional therapies by breast cancer patients. This population-based study includes women in four ethnic groups living in San Francisco County who were newly diagnosed with breast cancer during the period 1990 to 1992. Participation involves a single, 30-minute telephone interview concerning use of therapies as well as potential influences on use, such as age, acculturation, education, income, religion, and social support.

We obtain the names of patients from the California Tumor Registry, the agency mandated by the State to collect tumor data. Prior to contacting patients or their next of kin (if deceased), we routinely ask their physicians about any medical contraindications to approaching them. You were listed as the physician of record for \_\_\_\_\_\_. If you feel there are any medical contraindications to our making initial contact with her next of kin by letter, please call me at (415) 476-0743. If I do not hear from you within two weeks, I will assume that we can approach this patient's relative. We will then send a letter explaining our study for proxy interview.

Our multi-lingual trained interviewers are sensitive to challenges faced by cancer patients and their family. They will conduct the interview at a time convenient to each subject. All records will be handled as confidentially as possible. No patient or physician will be identified by name to anyone outside our research unit. A subject may refuse to participate at any time. We expect that most subjects will be glad to contribute to cancer research by helping with our study.

I greatly appreciate your assistance. Please feel free to call me if you would like any further information about this study.

Sincerely,

Marion Lee, Ph.D. Principal Investigator Associate Professor of Epidemiology and Biostatistics

## Consent To Be A Research Subject

A. Purpose and Background

Dr. Marion Lee and her colleagues from the University of California are conducting a study to learn the prevalence of use of breast cancer therapies including conventional, alternative and unconventional treatments among 400 patients diagnosed with breast cancer representing four ethnic groups in San Francisco. The study was funded by U.S. Army Medical Research and Material Command. The study will also determine if factors such as age, ethnicity, acculturation, income, education, religion, social support and some breast cancer prognostic factors on the use of different therapies.

#### **B.** Procedures

I will receive a letter explaining the study and will be asked to participate in a 30 minutes telephone interview conducted by the language of my choice.

#### C. Risk and Discomfort

No sensitive information will be solicited and no health risks are involved.

#### D. Benefits

There is no direct benefit for my participation. However results from this study will benefit breast cancer patients in general by providing important data for the use and outcome of alternative therapies.

#### E. Cost

There will be no cost to me for my participation.

#### F. Confidentiality

My research records will be handled as confidential as possible. All records will be coded and kept in locked files so that only study investigators have access to them. No individual identification will be used in any reports or publications. Representatives from the U.S. Army Medical Research And Material Command can review my research records as part of their responsibility to protect human subjects in research.

#### G. Consent for Participation is Voluntary

I Have the right to decline to participate or to withdraw at any point in this study without any jeopardy. If I wish to participate, I should sign below and I have been provided a copy of this consent form to keep. I am authorized all necessary medical care for injury or disease which is the proximate result of my participation in this research. The U.S. Army requires that UCSF provide such medical care when conducting research with private citizens. Other than medical care that may be provided, I will not receive any compensation for my participation in this research study; however, I should understand that this is not a waiver or release of my legal rights.

Dear Ms:
We would like your help with a research study being conducted by the University of California, San Francisco. The purpose of this study is to increase our knowledge of which treatments and therapies are used by women who have had breast cancer. Therefore, we are interviewing women who were diagnosed in San Francisco with breast cancer during the time period January 1990 through December 1992. We obtained your name from the California Tumor Registry. Your physician,, M.D., has been contacted and agreed for us to approach you.
Your participation in this study would be greatly appreciated. It would consist of a single telephone interview lasting about twenty minutes, concerning your choice of therapies, feelings about health care, health status, ethnicity, education, and family and friend support. The information you provide will be kept as confidential as much as possible, and your name will not appear in any report or publication resulting from this study. Your participation is entirely voluntary. The interview will take place at a time convenient for you, and you may refuse to answer any question or stop the interview at any time.

We hope you will help us with this study, as each person's experience adds valuable information in the effort to provide the most effective cancer therapies.

Within the next week, one of our experienced interviewers will call to see if you are willing to participate in the study, and if so, to interview you then if the time is convenient, or to arrange another time for the interview. Please feel free to ask her any questions, or you may call me collect. Also, if you do not want to participate, please call me at (415) 476-0743 and we will not contact you. If your current telephone number differs from the one listed above, we would appreciate it if you would call our office to give us the number where you may be reached.

You may talk with someone regarding you as a research subject at the Committee on Human Research by calling (415) 476-1814. Thank you very much for your attention to this letter, We look forward to speaking with you.

Sincerely,

Marion Lee, Ph.D.

<b>^</b> .	uerida	Sra	19th	
Qι	Jenua	Sia.	Olla.	 •

Nos gustaría que nos ayudara con un estudio de investigación dirigido por la Universidad de California, San Francisco. El propósito de este estudio es aumentar nuestro conocimiento sobre qué tratamientos y terapias son usados por mujeres quienes han tenido cáncer en el seno. Por lo tanto, estamos entrevistando mujeres a quienes les han diagnosticado cáncer en el seno en San Francisco durante el período de tiempo entre Enero de 1990 y Diciembre de 1992. Nosotros obtuvimos su nombre en el California Tumor Registry. Su doctor, \_\_\_\_\_\_, M.D., ha sido contactado y estuvo de acuerdo con que nosotros nos comunicaramos con Ud.

Su participación en este estudio sería altamente agradecida. Esta consistiría de una sola entrevista telefónica de una duración de aproximadamente veinte minutos relacionada con su preferencia sobre terapias, sus sentimientos acerca del cuidado de la salud, estado de la salud, origen étnico, educación y apoyo de la familia y los amigos. La información que nos proporcione se mantendrá tan confidencial como sea posible y su nombre no va a aparecer en ningún reporte o publicación que resulte de este estudio. Su participación es completamente voluntaria. La entrevista tomará lugar a una hora que a Ud. le convenga y Ud. puede rehusarse a contestar cualquier pregunta o parar la entrevista en cualquier momento.

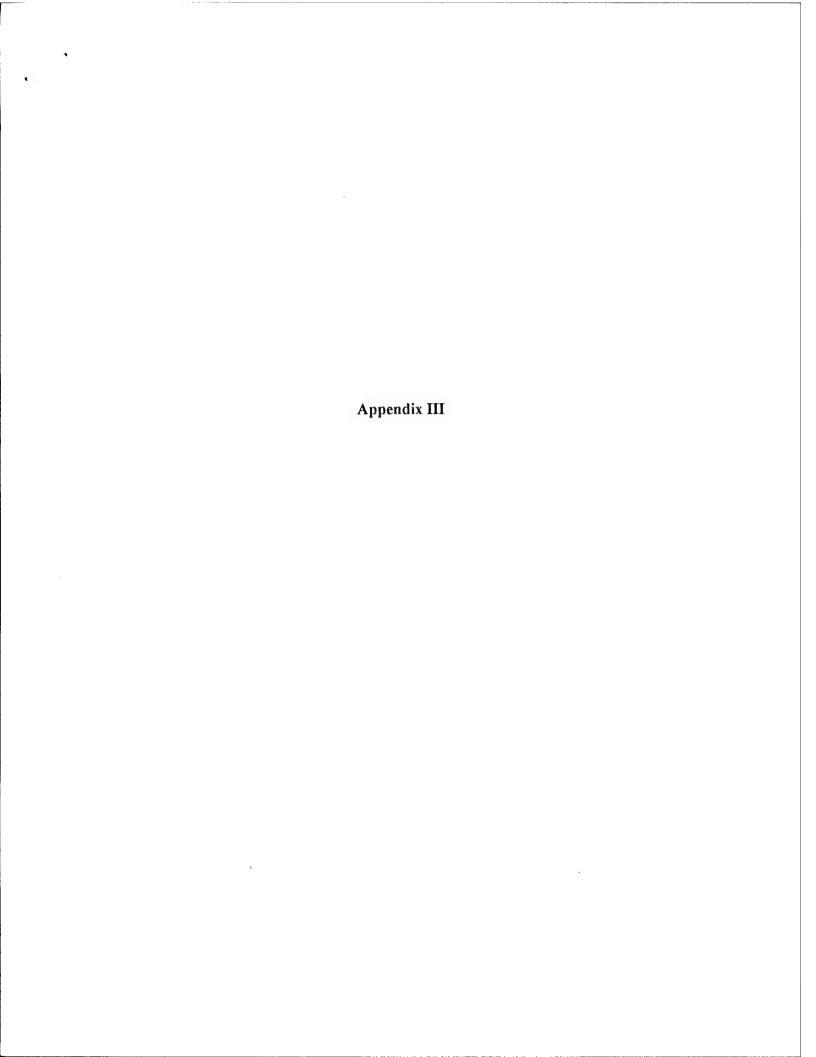

Nosotros esperamos que nos ayude con este estudio, ya que la experiencia de cada persona añade información valiosa en el esfuerzo de proporcionar las terapias más efectiva para combatir el cáncer.

La próxima semana, una de nuestras experimentadas entrevistadoras la va a llamar para ver si Ud. está dispuesta a participar en el estudio y, si Ud. lo está, la entrevistará en ese momento si la hora es conveniente para Ud., o acordarán en otra hora para la entrevista. Por favor no deje de hacerle cualquier pregunta que tenga o también Ud. puede llamarme sin cargo alguno para Ud. (collect). También, si usted nó quiere participar, por favor llámeme al (415) 476-0743 y no le llamaremos. Si su número de teléfono es diferente del que aparece en la parte de arriba de esta carta, le agradeceríamos que llamara a nuestra oficina para que nos dé el número en el que la podamos contactar.

Ud. puede hablar con alguien en relación con su participación como sujeto de investigación, en el Comité de Investigaciones Humanas llamando al (415) 476-1814. Muchas gracias por su atención a esta carta y esperamos hablar pronto con Ud.

Sinceramente,

Marion Lee, Ph.D. Investigador Principal Profesor Asociado de Epidemiología y Bioestadísticas

# INTERVIEWER'S TRAINING MANUAL CHOICES OF BREAST CANCER TREATMENTS IN FOUR ETHNIC GROUPS

## I OVERVIEW OF THE STUDY

## A. Background

The San Francisco Bay Area is not only rich in ethnic and cultural diversity but also is at the forefront of alternative medical practices. Yet, reliable and comparable data on use and choices of cancer therapies in the four ethnic populations have not been developed. This study proposes to systematically determine the prevalence of utilization of conventional and unconventional breast cancer treatments through telephone interviews with approximately 400 breast cancer patients diagnosed between 1990 and 1992 representative of four ethnic groups (Whites, Blacks, Hispanics, and Chinese-Americans) in San Francisco. Our long range goal is to assess outcomes including cost, quality of life, recurrence and survival among breast cancer patients in the four ethnic groups.

## B. Objectives

- 1. To determine the types of conventional and unconventional therapies used by women in the four different ethnic groups in San Francisco who were diagnosed with breast cancer between 1990 and 1992.
- 2. To determine the prevalence of use of conventional and unconventional cancer therapies alone or in combinations.
- 3. To assess the frequency and length of use of various medical care alternatives before and after cancer diagnosis confirmation.

4. To determine the influences, if any, of ethnicity, nativity (foreign born vs. US born), length in the US, acculturation, family income, education, religion, social support, health insurance status, first degree family history of breast cancer, age at diagnosis, on the use of different therapies.

## C. Number of interviews to be completed

We will conduct a population-based cross-sectional telephone survey of White, Black Hispanic, and Chinese-American breast cancer patients or their proxies. Approximately a total of 100 complete interviews from each ethnic group is expected. Because of the limited number of subjects in the Black, Hispanic, and Chinese groups, effort to increase participation is highly needed.

## D. Projected time-line for data collection

We plan to begin interviewing from March 1, 1995 and expect to complete the interviews by December, 1995.

#### E. Case Selection

Eligible women will include those who were (1) newly diagnosed with primary breast cancer, either carcinoma-in-situ or invasive between January 1990 and December 1992; (2) identified on the tumor registry abstract form as non-Hispanic Whites, Hispanics, Blacks or Chinese; (3) living in San Francisco at diagnosis. Cases will be identified through the tumor registry of Northern California Cancer Center which is part of the Surveillance, Epidemiology and End Results (SEER) program.

## II. ADMINISTRATION OF THE QUESTIONNAIRE

## A. Reading and asking the questions

You should remain neutral and objective during the interviews. All the questions should be read and asked exactly as worded, in order to assure reliability, no matter who asks the questions. If the questions are not asked identically to each respondent, the answers to a given question would not be comparable, because each respondent may interpret the question differently; therefore, there should not be any paraphrasing or rewording of the questions.

All the questions should be read in a natural manner. It is always a good idea to practice reading all the questions until they sound natural to the respondents. Always follow the sequence of the questions. Read the questions slowly. If the question is not understood, repeat the question exactly as stated. Do not try to rephrase the question in order to make it more understandable to the respondent.

### B. Instructions

All the instructions are CAPITALIZED; AND THEY ARE NOT TO BE READ to the respondents.

All the response categories are not to be read unless specified in the instructions.

## C. Administrating the Questionnaire

## INTRODUCTION

Request to speak with the designated respondent. If the person on the phone is the designated respondent/when the designated respondent comes to the phone, confirm her name, introduce yourself (READ THE TELEPHONE CONSENT SCRIPT) and proceed to Q1. If the respondent is not available, call back some other time. Refer all the research questions to Dr. Marion Lee at (415) 476-0743.

- \* If a proxy is interviewed, use "she" or "her" instead of "you" and "your".
- Use 9's to designate DK or Do Not Recall.
- \* USE A PENSIL TO RECORD THE ANSWERS.
- Q1 Confirm the eligibility of the respondent. If the respondent has never been diagnosed with breast cancer, thank her and terminate the interview.
- Q2 Self-explanatory. Record the month and the year of the breast cancer diagnosis.
- Q3 Self-explanatory.
- Q4/Q5
  Self-explanatory. READ ALL RESPONSE CATEGORIES.
- Q6 READ ALL RESPONSE CATEGORIES. If the response is "By yourself", skip to Q7b. Otherwise, go to Q7a.
- Q7a If the response is "No", skip to Q8. Otherwise, go to Q7b and record verbatim.
- Q7b Record what the respondent says.
- Q7c Record either the number of days (if less than one month) or the number of months (if one month or more).
- Q8 Circle ONE response (YES/NO/DK) for EVERY question. READ ALL RESPONSE CATEGORIES.
  - 8f If the response is "Yes", record the name of the dietary therapy.
- Q9 If the response is "Yes", record the name of the treatment(s) and/or therapy(ies).

## Q10 - Q25

- \* Check the answers in Q8.
- \* Ask the question vertically (from top to bottom) for all the treatments and/or therapies that the respondent says "yes" to in Q8.
- \* Conventional treatments are listed on pages 4 to 7.

  All other treatments/therapies are listed on pages 8 to 15

  (use additional pages if there are more than 4 unconventional treatments/therapies).

## Surgery/Reconstructive Surgery/Chemotherapy/Radiation

#### 10a FOR SURGERY:

Ask question a through d.

If the response is "Yes", ask "How many" and record the number of times receiving the particular surgery. If the respondent has had more than one kind of the surgeries, choose the most severe type of surgery and ask the rest of the questions base on the most sever type of surgery. The severity of the surgeries are in ascending order. In other words, Radical mastectomy is more severe than Modified radical mastectomy, MRM is more severe than Lumpectomy, and Lumpectomy is more severe than Biopsy.

### FOR RECONSTRUCTIVE SURGERY

If the response is "No", skip to the next treatment that the respondent has had. Otherwise, ask "When" and record the date of receiving reconstructive surgery.
